1. Overview – The Future of Mobile and Electronic Payments

Mobile payment technology allows users to make online and point-of-sale purchases, send and receive money, and pay bills through a web browser or a mobile device. A study published by Allied Research in February 2018 found that the mobile payment market is anticipated to grow at a compound annual growth rate (CAGR) of 33.8% from 2017 to 2023 reaching a market size of \$4,574 billion by 2023.¹ While mobile money transaction volume is growing at significant rates, it still accounts for only a small portion of transactions globally². This may leave a lot of headroom for growth within the industry. By providing leveraged exposure to the ETFMG Prime Mobile Payments ETF, Sequoia Future Tech Series 2 is designed to capture this growth as smartphone penetration increases, economies go cashless, consumer preferences shift, and industry competition surges².

2. The ETFMG Prime Mobile Payments ETF (“IPAY”)

IPAY³ is a US listed exchange traded fund that seeks to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Prime Mobile Payments Index⁴.

The Prime Mobile Payments Index (“Index”) is designed to measure the performance of companies engaged in the mobile and electronic payments industry that have satisfied the eligibility requirements of the Index as specified via the Index methodology.⁵ Please see below for more information including the current top 10 holdings of IPAY as at 14 May 2019.

There are billions of mobile devices in use around the world, and each of them may facilitate payment for a wide variety of goods and services. The Index uses a proprietary methodology to provide a reference measure for the global payments industry by focusing on companies facilitating the mass migration from physical cash registers to a mobile point of sale. Potential beneficiaries of this growing trend include software providers, payment processors, gateways, and credit card networks. The Index which the IPAY tracks is calculated on a gross total return basis. This means that the Index is calculated on the basis that all underlying dividends are re-invested on a gross basis without the deduction of any taxes.

Why Consider IPAY?

- IPAY seeks to capitalise on the shift from credit card and cash transactions to digital and electronic.
- The first and only ETF to target the mobile payments industry.⁶
- Aims to capitalise on the transition taking place from cash/physical credit card payments to a mobile/digital system.
- Benefits from the increasing use of smartphones, ecommerce, and the perceived need for hassle free transacting.

Final Strategy Value	The average of the Strategy Values on the Final Averaging Dates
Strategy Value	<p>The Strategy Value is dependent on the Units’ varying levels of exposure to the relevant Reference Asset. This varying level of exposure is determined by the Participation Rate (“PR”) which is itself calculated by reference to the Target Participation Rate (“Target PR”) subject to a 10% Tolerance Condition and 5% Liquidity Control Mechanism.</p> <p>The Target PR is determined by the Target Volatility of 15.0% and the volatility of the Reference Asset over the previous 10 or 50 Reference Asset Business Days (“Business Days”).</p> <p>The 10% Tolerance Condition aims to reduce the frequency of reallocation to the Reference Asset and reduce the transaction costs (including the buy sell spread) of the Strategy. For the Tolerance Condition to be triggered the PR must be more than 10% (positive or negative) away from the Target PR before a reallocation is made.</p> <p>The 5% Liquidity Control mechanism imposes a constraint on the change in PR in the event the Tolerance Condition is satisfied and a reallocation must occur in the Strategy. The aim of the Liquidity Constraint is to ensure that when a reallocation occurs, there is enough liquidity in the Reference Asset to minimise the impact on the market price of the Reference Asset. The amount of any change in the PR rate on any Business Day is limited to 5% of the allocation to the Reference Asset.</p> <p>The Strategy Value is used to determine the value of the Performance Coupon, if any.</p> <p>The Strategy Value is calculated each Basket Business Day by:</p> <ul style="list-style-type: none"> • taking the change in the level of the relevant Reference Asset from the close of the previous Business Day to the close of the current Business Day (including any dividends paid), • multiplying it by the Participation Rate (which determines the exposure to the relevant Reference Asset) from the previous Business Day, • taking the USD Libor 3 month rate from the previous Business Day and converting this to a daily interest rate, • multiplying this new interest rate by: (100% minus the Participation Rate), • taking the sum of these two amounts and deducting an Adjustment Factor of 1.5% p.a. calculated on a daily accruals basis using a 360 day count, • multiplying this amount by the Strategy Value from the previous Business Day.

The effect of this is that as the volatility of the Reference Asset increases above the level of the Target Volatility, exposure to the Reference Asset decreases and exposure to the USD Libor 3 month rate increases, and vice versa, subject to the application of the 10% Tolerance Condition and 5% Liquidity Control mechanism. In this way the Strategy Value will vary from one Business Day to the next depending on the change in the level of the Reference Asset and the Participation Rate.

The Issuer intends to publish the Strategy Value (on a monthly basis) on its website at www.sequoiasi.com.au.

Please refer to “Section 4: Formulae and Calculations” for the calculation of the Strategy Value.

Adjustment Factor

1.5% p.a. accrued daily as a reduction to the Strategy Value.

This has the effect of reducing the Strategy Value. It is included to enable efficient pricing of the underlying hedge entered into by the Issuer.

Please refer to Section 4 “Formulae and Calculations” for more information

Participation Rate and Target Volatility

Volatility is the relative rate at which the price of an asset may move (increasing or decreasing), over a period of time. The greater the amount and frequency of an asset’s relative price changes (either positively or negatively) over a period of time, the higher the volatility. The higher the volatility of an asset the greater the perceived risk.

The Participation Rate is a mechanism designed to manage market risk associated with the performance of the Reference Asset. It operates by varying the exposure that the Units will have to the Reference Asset depending on the Target Participation Rate subject to the application of the 10% Tolerance Condition and 5% Liquidity Control mechanism.

The Target Participation Rate is determined by reference to the volatility of the Reference Asset and the Target Volatility. The higher the volatility, the lower the Target Participation Rate (and hence the lower the potential exposure to the Reference Asset) and vice versa.

Target Volatility is the level of volatility that would provide a Target Participation Rate of 100%. The Units have a maximum Target Participation Rate of 100%. Accordingly, Investors will not receive enhanced exposure to the Reference Asset even at times of low volatility.

The Target Participation Rate is determined on each Business Day by reference to the highest volatility of the Reference Asset over the previous 10 or 50 Business Days. The Target Participation Rates will vary between 0% and 100%.

The 10% Tolerance Condition and 5% Liquidity Control mechanism then work in conjunction with the Target PR to ensure the PR rate does not change too frequently whilst at the same time helping to ensure the strategy is managed in a way which is consistent with the underlying liquidity of the Reference Asset. This allows the Hedge Provider to offer a hedge over the Reference Asset with a Target Volatility mechanism which in turn translates into a cheaper interest rate for end investors.

The Participation Rate for each Series is determined using the formula set out in Section 4 “Formulae and Calculations”.

Target Volatility

15.0%

Target Participation Rate

The Target Participation Rate will be calculated by reference to the Target Volatility and the level of Realised Volatility of the Reference Asset.

$$\text{Target PR}_t = \text{Min} (100\%, \text{Target Volatility/Realised Volatility}_{t-1})$$

$$\text{Target Volatility} = 15.0\%$$

$$\text{Realised Volatility} = \text{Max} (\text{Vol}_{10,t}, \text{Vol}_{50,t})$$

$\text{Vol}_{10,t}$ = volatility of the Reference Asset over the previous 10 Business Days.

$\text{Vol}_{50,t}$ = volatility of the Reference Asset over the previous 50 Business Days.

Based on this, the Target Participation Rate (PR_t) would have been 93.96% on 10 May 2019, based on a Realised Volatility level of 15.96% on 10 May 2019, a few weeks before the date of this PDS. This is calculated as:

$$\text{Target PR}_t = \text{Min} (100\%, 15.0\%/15.96\%)$$

$$\text{Target PR}_t = 93.98\%$$

There is a risk that the Target Participation Rate for any Series could drop to significantly below 100% during the Investment Term. A Target Participation Rate of below 100% means that Investors could have less than 100% exposure to the Reference Asset when calculating the Participation Rate subject to the application of the 10% Tolerance Condition and 5% Liquidity Control mechanism.

Investors should note that historical volatility levels of the Reference Asset are not indicative of the future levels of volatility. Specifically, Investors should note that there may be a risk that the level of volatility will be high throughout the majority or whole of the Investment Term. Should this occur, the Target Participation Rate may result in less than 100% exposure to the Reference Asset throughout the majority or whole of the Investment Term. The minimum Target Participation Rate is just above 0% which means that Investors have would have almost no exposure to the Reference Asset.

Example:

Day	IPAY price	VOL10 (t)	VOL50 (t)	Target PR(t)	PR(t)	Strategy Value (t)
1	41.32	14.59%	13.09%	102.79%	100.00%	100.00%

Key risks include:

- Your return (including any Coupon) is affected by the performance of the Reference Asset. There is no guarantee that the Reference Asset will perform well.
- The Units have varying levels of exposure to the Reference Asset depending on volatility due to the variable Participation Rate. It operates by varying the exposure that the Units will have to the Reference Asset depending on the Realised Volatility of the Reference Asset and the Target Volatility. There is the risk that the Participation Rate could drop below 100% during the Investment Term in which case Investors will not gain the full benefits of an increase of the value of the Reference Asset.
- Investors should note that there is a lag in measuring the Realised Volatility of the Reference Asset. This means that where there has been a period of high Realised Volatility, the Investor's exposure to the Reference Asset will be low, regardless of whether the Reference Asset is performing positively or negatively.
- Investors should note that there can be a lag when implementing changes in the Participation Rate due to the impact of applying the 10% Tolerance Condition and 5% Liquidity Control mechanism. This means that where there has been a period of increased Realised Volatility, the Investor's exposure to the Reference Asset may either not change at all due to the Tolerance Condition not being satisfied or alternatively taking a number of days to implement due to the application of the 5% Liquidity Control Mechanism. In periods of extreme volatility the Liquidity Control Mechanism may result in the Participation Rate never reaching its intended level on any given day. This can be the case regardless of whether the Reference Asset is performing positively or negatively. This lag may have an adverse impact on the value of the Strategy and unit Price of Series 2.
- The two potential Performance Coupons and the Final Coupon are determined by reference to the Initial Strategy Value, the average of the Strategy Values on the relevant Coupon Averaging Dates and the Final Strategy Value as well as changes in the AUD exchange rate. An increase in the AUD/USD exchange rate between the relevant dates will reduce the Performance Coupons and Final Coupon whilst a decrease in the AUD/USD rate between the relevant dates will lead to an increase in the Performance Coupons and Final Coupon;
- The Initial Strategy Value, First Year Strategy Value, Second Year Strategy Value and Final Strategy Value are subject to averaging. Averaging may decrease the impact of an increase in the Reference Asset during the Investment Term.
- There will be no Performance Coupon payable if the performance of the Strategy Value is negative at a Coupon Determination Date.
- There is no guarantee that the Units will generate returns in excess of the Prepaid Interest, Risk Management Fee and other Fees, during the Investment Term. Additionally, in the event of an Investor requested Issuer Buy-Back, Early Maturity Event, you will not receive a refund of your Prepaid Interest or Fees.
- Gains (and losses) may be magnified by the use of a 100% Loan. However, note that the Loan is a limited recourse Loan, so you can never lose more than your Prepaid Interest Amount and Fees paid at Commencement.
- Investors are subject to counterparty credit risk with respect to the Issuer and the Hedge Counterparty; and
- the Units may mature early following an Early Maturity Event, including an Adjustment Event, Market Disruption Event or if the Issuer accepts your request for an Issuer Buy-Back.

Please refer to Section 2 "Risks" of the Master PDS for more information.

Other Fees

The following other Fees are payable in respect of the Units (in addition to the Performance Fee, which is discussed below):

Upfront Adviser Fee (if any): You may nominate an Upfront Adviser Fee to be paid to your Adviser in the Application Form attached to this Term Sheet PDS. The Issuer will deduct any Upfront Adviser Fee from the Total Payment Amount and pay it to your Adviser in accordance with the terms of this PDS.

Application Fee: The Issuer charges an Application Fee of 2.2% of the Issue Price of each Unit, i.e. \$0.022 per Unit. The Issuer may agree with your Adviser to forgo part or all of the Application Fee at the Issuer's absolute discretion.

Assuming you nominated an Upfront Adviser Fee of \$1,100, and you applied for 50,000 Units in Series 2, in addition to the Prepaid Interest you would pay other Fees of:

Application Fee = 50,000 x \$0.022 = \$1,100

Upfront Adviser Fee = \$1,100

Total = \$2,200

Risk Management Fee

There is a Risk Management Fee of 0.7% p.a. of the Issue Price paid upfront for the full 3 year Investment Term.

The Risk Management Fee is a fee charged for managing the volatility (a measure of risk) of the Reference Asset. The Issuer aims to ensure that the volatility of the Reference Asset is equal to or less than the level of the Target Volatility, however, there is no guarantee that this level of volatility will be achievable throughout the Investment Term.

Risk Management Fee per Unit:

= 0.7% p.a. x 3 years x \$1.00 per Unit

= \$0.021 per Unit for the Investment Term of 3 years. The Risk Management Fee must be paid to the Issuer by the Application Payment Date.

Therefore, if you invested the Minimum Investment Amount of \$50,000 for the Units, in addition to any Interest and other Fees paid in relation to the Units, you would pay a Risk Management Fee of \$1,050 on the Application Payment Date.

Total Investment Cost payable upfront

Type of Cost	Cost per Unit
Prepaid Interest	\$0.1785
Risk Management Fee	\$0.021
Application Fee	\$0.022
Total Investment Cost:	\$0.2215

Performance Fee

Any Performance Coupons are subject to a 10% Performance Fee. The Performance Fee has the effect of reducing the gross amount of any Coupon payable to the Investor. For example, if a 10% Performance Coupon is payable, then the Net Amount payable to the investor would be 9% after the deduction of the Performance Fee, ignoring the impact of changes to the AUD/USD exchange rate. If a Performance Coupon or Final Coupon is 0%, then no Performance Fee is payable.

Derivatives

The Issuer obtains exposure to the Reference Asset through the use of derivatives rather than a direct investment in the Reference Asset.

Taxation

Please refer to Section 4 "Taxation" of the Master PDS.

Applications and issue of Units

Applications may be accepted or rejected at the discretion of the Issuer. Units will be issued within one month upon receipt of application monies from an Investor. The Unit's economic exposure to the Reference Asset will begin on the Commencement Date. If a Unit is issued prior to the Commencement Date it will have no economic exposure until the Commencement Date.

The Sequoia Future Tech – Series 2 Units will only be issued at the discretion of the Issuer, and applications may be accepted or rejected at the discretion of the Issuer. Without limiting its discretion, the Issuer may choose not to proceed with the issue of the Units for a Series and terminate the product for those Units already issued for any reason whatsoever, including (without limitation) if there is a significant change in the Issuer's cost of hedging between the date of this PDS and the Commencement Date. Where the Issuer has not received the Prepaid Interest, Application Fee or Upfront Adviser Fee (if any) in respect of a Unit(s) from the Investor by the Application Payment Date, the Issuer will cancel the Units relating to the unpaid amounts and will arrange for the Investors name to be removed from the register of Unitholders.

If a decision is made for any reason not to issue, or not to proceed with the issue of the Units in Series 2, the Issuer will return the Prepaid Interest, Application Fee and Upfront Adviser Fee (if any) to applicants (without interest) within 10 Business Days of the scheduled Commencement Date and any Units already issued will be terminated.

The Units may mature early in the case of an Early Maturity Event or Issuer Buy-Back, and the Maturity Date may be extended in the case of a Market Disruption Event.

4. Worked Examples

Here are some examples demonstrating how the Performance Coupons and Final Coupon are calculated. The examples are hypothetical only and are not forecasts or simulations of Unit returns nor are they a reference to past performance. The actual returns on the Units may be materially different from what is shown in these examples.

These examples may help Investors decide if the Units are a suitable investment. No content in this section or elsewhere in the Term Sheet PDS or PDS is investment advice and Investors should speak to their financial adviser before investing.

4.1 How does the investment perform?

Units may entitle Investors to receive Performance Coupons at the end of years 1 and 2, and a Final Coupon at the end of the Investment Term depending on the performance of the Strategy Value. The examples below demonstrate how the Performance Coupons and Final Coupon are calculated, and what Investors will receive at Maturity, depending on whether the performance of the Strategy Value over the life of the investment has been negative, positive or neutral.

The examples set out below show the return on an investment in the Units at Maturity.

Rounding:

All calculations made by the Issuer for the purposes of these worked examples will be made to not fewer than two decimal places. Other than as provided in these examples, rounding of numbers will not occur until the final calculation of a relevant amount or number at which time the Investor's entitlements will be aggregated and that aggregate will be rounded so that all money amounts are rounded down to the nearest whole cent and all numbers of Delivery Assets are rounded down to the nearest whole number.

Assumptions:

The below examples assume that Investors decide to invest in 50,000 Units with a AUD \$1.00 Issue Price, resulting in an Investment Amount and Loan Amount of AUD\$50,000 in Series 2.

The below examples also assume that there are no Early Maturity Events, Issuer Buy-Backs, Adjustment Events or Market Disruption Events.

Calculation of the Coupons

There are two potential Performance Coupons, and one potential Final Coupon, payable to Investors during the Investment Term. Each is calculated with reference to the Reference Asset on the relevant Coupon Determination Date or Final Coupon Determination Date (as applicable).

The following examples show how the net value (that is, the value as reduced by the impact of any relevant Performance Fee) of the first Performance Coupon, second Performance Coupon and Final Coupon would be calculated, based on the assumed Strategy Values set out for Scenario 1 in the table below for a hypothetical investment in Series 2 of 50,000 Units at an Issue Price of AUD\$1.00 per Unit.

Date	Strategy Value			AUD/USD exchange rate (Series Spot rate)
	Scenario 1 Positive Performance	Scenario 2 Negative Performance	Scenario 3 Moderate Performance	
Initial Strategy Value	100	98	101	0.70
First Year Strategy Value	125	97	110	0.73
Second Year Strategy Value	130	91	116	0.65
Final Strategy Value	150	91	132	0.62

Calculate the value of the Net First Coupon

For Scenario 1, the Net First Coupon per Unit would be calculated as follows at the relevant Coupon Determination Date:

$$\begin{aligned}\text{Gross First Coupon} &= \text{Max}(0, (\text{Min}(12\%, (\text{First Year Strategy Value}/\text{Initial Strategy Value} - 1))) \\ &= \text{Max}(0, (\text{Min}(12\%, (125/100 - 1)))) \\ &= \text{Max}(0, (\text{Min}(12\%, (1.25 - 1))) \\ &= \text{Max}(0, (\text{Min}(12\%, 25\%)) \\ &= 12\%\end{aligned}$$

$$\begin{aligned}\text{Net First Coupon} &= \text{Gross First Coupon} \times 90\% \times (\text{Series Spot Rate}_{y0} / \text{Series Spot Rate}_{y1}) \\ &= 12\% \times 90\% \times (0.70/0.73) \\ &= \$0.1080 \text{ AUD per Unit} \\ &= \$0.1036\end{aligned}$$

(The 90% shown in the above formula has the effect of reducing the Gross First Coupon by the 10% Performance Fee).

Based on a holding of 50,000 Units, the Gross First Coupon paid would be 12%. After taking into account the impact of Performance Fees and change in AUD/USD exchange rate, the total amount of the Net First Coupon payable to an Investor in cash would be AUD \$5,180.

Calculate the value of the Net Second Coupon

For Scenario 1, the Net Second Coupon per Unit would be calculated as follows at the relevant Coupon Determination Date:

$$\begin{aligned}
 \text{Gross Second Coupon} &= \text{Max}(0, (\text{Min}(12\%, (\text{Second Year Strategy Value/Initial Strategy Value} - 1 - \text{Gross First Coupon}))) \\
 &= \text{Max}(0, (\text{Min}(12\%, (130/100 - 1 - 0.10))) \\
 &= \text{Max}(0, (\text{Min}(12\%, (1.30 - 1 - 0.10))) \\
 &= \text{Max}(0, (\text{Min}(12\%, 20\%)) \\
 &= 12\%
 \end{aligned}$$

$$\begin{aligned}
 \text{Net Second Coupon} &= \text{Gross Second Coupon} \times 90\% \times (\text{Series Spot Rate}_{y0} / \text{Series Spot Rate}_{y2}) \\
 &= 12\% \times 90\% \times 0.70/0.65 \\
 &= \$0.1163 \text{ AUD per Unit}
 \end{aligned}$$

(The 90% in the above formula has the effect of reducing the Coupon by the 10% Performance Fee).

Based on a holding of 50,000 Units, the total Gross Second Coupon paid would be 12%. After taking into account the impact of Performance Fees and change in AUD/USD exchange rate, the total amount of the Net Second Coupon payable to an Investor in cash would be AUD \$5,815.

Calculate the value of the Final Coupon

For Scenario 1, the Net Final Coupon per Unit would be calculated as follows at the relevant Coupon Determination Date:

$$\begin{aligned}
 \text{Gross Final Coupon} &= \text{Max}(0, (\text{Final Strategy Value/Initial Strategy Value} - 1) - \text{Gross First Coupon} - \text{Gross Second Coupon}) \\
 &= \text{Max}(0, (150/100 - 1 - 0.12 - 0.12)) \\
 &= \text{Max}(0, (1.50 - 1 - 0.12 - 0.12)) \\
 &= \text{Max}(0, (1.50 - 1 - 0.12 - 0.12)) \\
 &= 26\%
 \end{aligned}$$

$$\begin{aligned}
 \text{Net Final Coupon} &= \text{Gross Coupon} \times 90\% \times (\text{Series Spot Rate}_{y0} / \text{Series Spot Rate}_{y3}) \\
 &= 26\% \times 90\% \times 0.70/0.62 \\
 &= \$0.2642 \text{ AUD per Unit}
 \end{aligned}$$

Based on a holding of 50,000 Units, the Gross Final Coupon would be 26%. After taking into account the impact of Performance Fees, the total amount of the Net Final Coupon payable to an Investor would be \$13,210 AUD.

Assuming a total cash outlay including interest and fees of \$11,075, the net cash profit generated by the investor after receiving the Performance Coupons over the 3 year term of \$24,205 would be \$13,130:

Total Cash Outlay	= (\$11,075)
Net Performance Coupons	= \$24,205
Net cash Profit	= \$13,130

Overview of Scenarios 1, 2 and 3

The table below sets out the Coupons per Unit which would apply to Scenario 1, 2 and 3. Each of the values listed below for Scenario 2 & 3 were calculated in the same way as set out in the examples above for Scenario 1.

	Scenario 1	Scenario 2	Scenario 3
Net First Coupon per Unit	\$0.1036	\$0.00	\$0.0769
Net Second Coupon per Unit	\$0.1163	\$0.00	\$0.0576
Net Final Coupon per Unit	\$0.2643	\$0.00	\$0.1610
Cumulative Net Coupons per Unit	\$0.4842	\$0.00	\$0.2955
Cumulative Net Coupons Paid on 50,000 Units	\$24,210	\$0.00	\$14,775
Initial Cash Paid on 50,000 Units	(\$11,075)	(\$11,075)	(\$11,075)
Net \$ Cash Profit/(Loss)	\$13,135	(\$11,075)	\$3,700
Gain/Loss as a % of Initial Cash Paid	118%	-100%	33%

5. Formulae and Calculations

Strategy Value, Reference Asset and Participation Rate

The Strategy Value (“**SV**”) is the value of the Strategy providing exposure to the Reference Asset with a variable exposure (through a variable Participation Rate) depending on the Realised Volatility of the Reference Asset and a Target Volatility of 15.0%. The Strategy Value will start at 100 on the Commencement Date.

Strategy Value₀ = 100%

$$\text{Strategy Value}_t = \text{Strategy Value}_{t-1} \times \left[1 + \text{PR}_{t-1} \times \left(\frac{\text{Reference Asset}_t + \text{Net Div}_t}{\text{Reference Asset}_{t-1}} - 1 \right) + (1 - \text{PR}_{t-1}) \times \text{rate}_{t-1} \times \frac{\text{Act}_{t-1,t}}{360} \right] \times \left(1 - \text{AF} \times \frac{\text{Act}_{t-1,t}}{360} \right)$$

Where:

Reference Asset_t means the closing price of the Reference Asset on the Scheduled Exchange Business Day t

Reference Asset_{t-1} means the closing price of the Reference Asset on the business day before Scheduled Exchange Business Day t

Strategy Value₀ means the Strategy Value on the Commencement Date.

Net Div(t) means any cash dividends received by the Hedge Provider on Scheduled Exchange Business Day t in respect to the hedge position they hold in the Reference Asset, net of any relevant local tax withholding, applicable charges, taxes, costs and expenses.

rate_t is the 3-Month USD LIBOR rate, fixed at 11am London time, or thereabouts, two (2) London Business Days prior to the start of each Interest Period, according to Reuters Page “LIBOR01”, as determined by the Issuer. If such rate does not appear on Reuters Page “LIBOR01”, the rate for the relevant day will be determined by the Issuer in good faith and in a commercially reasonable manner.

AF = Adjustment Factor = 1.5% p.a.

Act(t-1,t) is the number of calendar days from and excluding the Scheduled Exchange Business Day t-1, to and including the Scheduled Exchange Business Day t

PR_t is the Participation Rate as of Scheduled Exchange Business Day t and is capped at 100%, as determined as follows:

For the first Scheduled Exchange Business Day (i.e. t=0):

PR₀ = Target PR-1

t=0 = The Commencement Date.

t= -1 = the first Scheduled Exchange Business Day t before the Commencement Date

Participation Rate (PR): For any subsequent Scheduled Exchange Business Day t, then:

$$\text{PR}_{t+1} = \begin{cases} \text{Target PR}_t & \text{if } \text{abs}\left(\frac{\text{PR}_t}{\text{Target PR}_t} - 1\right) > \text{Tol} \\ \text{PR}_t & \text{otherwise} \end{cases}$$

Tol means the tolerance and is set to 10.0% (“**10% Tolerance Condition**”)

In addition, PR_{t+1} will be computed so that $\text{abs}(\text{PR}_{t+1} - \text{PR}_t) < 5.00\%$ (“**5% Liquidity Control Mechanism**”):

Target PR is the Target Participation Rate as of Scheduled Exchange Business Day t calculated as follows:

$$\text{Target PR}_t = \frac{\text{Target Volatility}}{\max(\text{vol}_{10,t}; \text{vol}_{50,t})}$$

$$\text{Vol}_{n,t} = \sqrt{\frac{252}{n} \times \sum_{k=t-n+1}^{k=t} R_k^2}$$

$R_k = \ln\left(\frac{\text{Reference Asset}_k}{\text{Reference Asset}_{k-1}}\right)$ extrapolated when needed for 50 Scheduled Exchange Business Days prior to the Commencement Date, as determined by the Issuer at its discretion

vol_{10,t} means the realised volatility of the Reference Asset over the previous 10 Scheduled Exchange Business Days

vol_{50,t} means the realised volatility of the Reference Asset over the previous 50 Scheduled Exchange Business Days

vol_{n,t} means the realised volatility of the Reference Asset over the previous number (“n”) of Scheduled Exchange Business days (“t”)

n means 10 or 50, depending on Scheduled Exchange Business Days over which realised volatility is being calculated

Reference Asset_k means the closing level of the Reference Asset on Scheduled Exchange Business day t as published on the Relevant Exchange

Reference Asset_{k-1} means the closing level of the Reference Asset on Scheduled Exchange Business day t-1 as published on the Relevant Exchange

Target Volatility is set to 15.0%

Coupons

Gross First Coupon = $\text{Max}(0, (\text{Min}(12\%, \text{First Year Strategy Value}/\text{Initial Strategy Value} - 1)))$

Net First Coupon = $\text{Gross First Coupon} \times 90\% \times (\text{Series Spot Rate}_{y_0}/\text{Series Spot Rate}_{y_1})$

Gross Second Coupon = $\text{Max}(0, (\text{Min}(12\%, \text{Second Year Strategy Value}/\text{Initial Strategy Value} - 1 - \text{Gross First Coupon})))$

Net Second Coupon = $\text{Gross Second Coupon} \times 90\% \times (\text{Series Spot Rate}_{y_0}/\text{Series Spot Rate}_{y_2})$

Gross Final Coupon = $\text{Max}(0, (\text{Final Strategy Value}/\text{Initial Strategy Value} - 1) - \text{Gross First Coupon} - \text{Gross Second Coupon})$

Net Final Coupon = $\text{Gross Final Coupon} \times 90\% \times (\text{Series Spot Rate}_{y_0}/\text{Series Spot Rate}_{y_3})$

Where:

Initial Strategy Value The average of the Strategy Values on the Initial Averaging Dates

First Year Strategy Value The average of the Strategy Values on the First Coupon Averaging Dates

Second Year Strategy Value The average of the Strategy Values on the Second Coupon Averaging Dates

Final Strategy Value The average of the Strategy Values on the Final Averaging Dates

Series Spot Rate_{y0} means the relevant AUD/USD spot rate at Commencement Date.

Series Spot Rate_{y1} means the relevant AUD/USD spot rate, one Business Day after the First Coupon Determination Date

Series Spot Rate_{y2} means the relevant AUD/USD spot rate, one Business Day after the Second Coupon Determination Date

Series Spot Rate_{y3} means the relevant AUD/USD spot rate, one Business Day after the Maturity date

The 90% shown in the above formulas has the effect of reducing the Gross Coupon by the 10% Performance Fee).
